FLHSMV FIRES (Advanced Search)

The screenshot shows the web interface for the Florida's Integrated Report Exchange System (FIRES). At the top, there is a browser address bar with the URL <https://www.firesportal.com/Pages/Public/PublicSearch.aspx?Id=19&CL=>. Below the address bar is the FIRES logo, which includes a stylized map of Florida and the text "FIRES FLORIDA'S INTEGRATED REPORT EXCHANGE SYSTEM".

The interface has a navigation bar with two main tabs: "HOME" and "PUBLIC". The "PUBLIC" tab is currently selected. Below the navigation bar is a horizontal menu with five options: "Quick Statistics", "Advanced Search" (highlighted in yellow), "Geo-location Search", "Traffic Crash Facts", and "Reports".

The main content area is titled "Criteria Selection". It contains three columns: "Index", "Operand", and "Search Value".

Index	Operand	Search Value
<input type="text" value="Date of Crash (required)"/>	<input type="text" value="is between"/>	<input type="text" value=""/> to <input type="text" value=""/> <input checked="" type="radio"/> Date <input type="radio"/> Date & Time <input type="radio"/> Time of Day

Below the search criteria table is a blue button labeled "Insert Criteria".

Useful Tips:

Hand Icon
Click this icon to move your view of a map up and down as well as left and right. This is particularly useful when you have zoomed in on a view, and want to move the view around to see other areas of interest.

Zoom Control
Click the '+' to zoom in on the map view to see more detail. Click the '-' to zoom out.

Draw Icon (square image next to hand icon)
Click this icon to allow you to draw a box/rectangle around a specific area of the map. Doing so will automatically enter the latitude and longitude criteria into your search and will display accidents that have coordinate within the box.

Polygon/Circle Icons (Images next to the square icon)
Click these icons to draw a polygon/circle around a specific area of the map. Doing so will automatically filter your results to the area inside the shape.

Adding Additional Criteria
Choose your index by selecting from the drop-down under the 'Index' label. Once you have chosen an index field, you can add your search values and click 'Insert Criteria'.

Description

 Edit

This dataset contains locations for fatal and serious injuries of non-motorists (bicyclists or pedestrians) on public roads in Florida from 2007 through 2016. A non-motorist is categorized by the reporting agency using Non-Motorist Codes 1, 2, 3, and 4 for pedestrian, other pedestrian, bicyclist, and other bicyclist respectively. Non-Motorist Codes 5, 6, and 7 denote occupants of motor vehicles not in transport (e.g. parked), occupants of non-motor vehicle devices, and unknown non-motorist types respectively.

This dataset is based on "Long Form" crash data reported by law enforcement to the Florida Department of Highway Safety and Motor Vehicles (FLHSMV). Geographic coordinates were processed and provided by the Florida Department of Transportation (FDOT).

FIRES Portal

FLHSMV is the official custodian of traffic crash data for the State of Florida. You may access and query crash records through their FIRES (Florida's Integrated Report Exchange System) portal [<https://www.firesportal.com/>].

Fatality Analysis Reporting System (FARS)

The screenshot shows the NHTSA website with a yellow header. The main navigation bar includes links for Driving Safety, Vehicle Safety, Research, Data, Laws & Regulations, and About NHTSA. The 'Data' link is highlighted. On the left, a sidebar lists various data resources, with 'Fatality Analysis Reporting System (FARS)' selected. The main content area is titled 'Fatality Analysis Reporting System (FARS)' and contains a description of the system, a link to 'How to Access FARS Data', and a list of recent publications and updates.

Driving Safety Vehicle Safety Research **Data** Laws & Regulations About NHTSA

Fatality Analysis Reporting System (FARS)

Detailing the Factors Behind Traffic Fatalities on our Roads - FARS
is a nationwide census providing NHTSA, Congress and the American public yearly data regarding fatal injuries suffered in motor vehicle traffic crashes.

How to Access FARS Data

Create your own fatality data run online by using the FARS Query System. Or download all FARS data from 1975 to present from the FTP Site.

- » Run a Query Using the FARS Web-Based Encyclopedia
- » 2010 FARS/NASS GES Standardization -- Posted 12/8/2011
- » FARS and GES Auxiliary Datasets Q & A -- Posted 9/9/2010 These files will complement the standard FARS and GES files by providing new variables that have been derived from all the commonly used NCSA analytical data classifications (e.g. speeding related, race and ethnicity, etc).
- » FARS Manuals and Documentation
- » 2009 FARS/NASS GES Changes (Sept. 14 Webinar Recording) -- Posted 9/23/2010

Additional Resources

- » NCSA Publications and Customized Data Requests (CATS)

The screenshot shows the FARS Data Tables interface. It features a navigation bar with tabs for Pubs/Data Requests, FARS Data Tables, Query FARS Data, State Traffic Safety Info, and Help. The 'FARS Data Tables' tab is active. Below the navigation bar, there are links for 'Crashes and All Victims', 'Occupants', 'Pedestrians', 'Alcohol', 'Fatalities and Fatality Rates', and 'Laws'. The main content area displays a table titled '2014 Traffic Fatalities by STATE and Percent Change from 2013 - State : USA'. The table has columns for State, 2014, 2013, and Percent Change. The data is sorted by State. The table includes links for 'File Versions' (2014 data based on FARS data publication, 1st release), 'GIS Map features', and 'Vehicle Registration and VMT Changes'.

Traffic Safety Studies with Highway Safety Manual

- Traffic Safety Studies
 - Reactive safety studies
 - Based on historical crash accumulation of a specific crash type at a given location
 - Predictive safety studies
 - Predict a given location's potential crash frequency using Highway Safety Manual (HSM) models
 - Can be conducted on existing or planned facilities
- HSM Part C Procedure
 - Predicted average crash frequency
 - Computed from safety performance function (SPF)
 - Expected average crash frequency
 - Computed from combination of SPF and historical crash data

HSM Part C Crash Predictive Model

$$N_{predicted} = N_{spf}(CMF_1 * CMF_2 * ... * CMF_x)C_x$$

where:

$N_{predicted}$ = predicted crash frequency

N_{spf} = predicted average crash frequency for base conditions

CMF_x = crash modification factor for a given geometric or traffic control feature

C_x = local calibration factor.

**Table 5-1. Facility Types and Site Types Included in the HSM Predictive Method
(Source: Highway Safety Manual, 2010, Table 3-2)**

HSM Chapter	Undivided Roadway Segments	Divided Roadway Segments	Intersections			
			Stop Control on Minor Legs		Signalized	
			3-Leg	4-Leg	3-Leg	4-Leg
10. Rural Two-Lane highways	✓		✓	✓		✓
11. Rural Multi-Lane Highways ¹	✓	✓	✓	✓		✓
12. Urban and Suburban Arterials ²	✓	✓	✓	✓	✓	✓

1. Methodology available for four lane divided and undivided. No methodology is currently available for six lane rural highways.

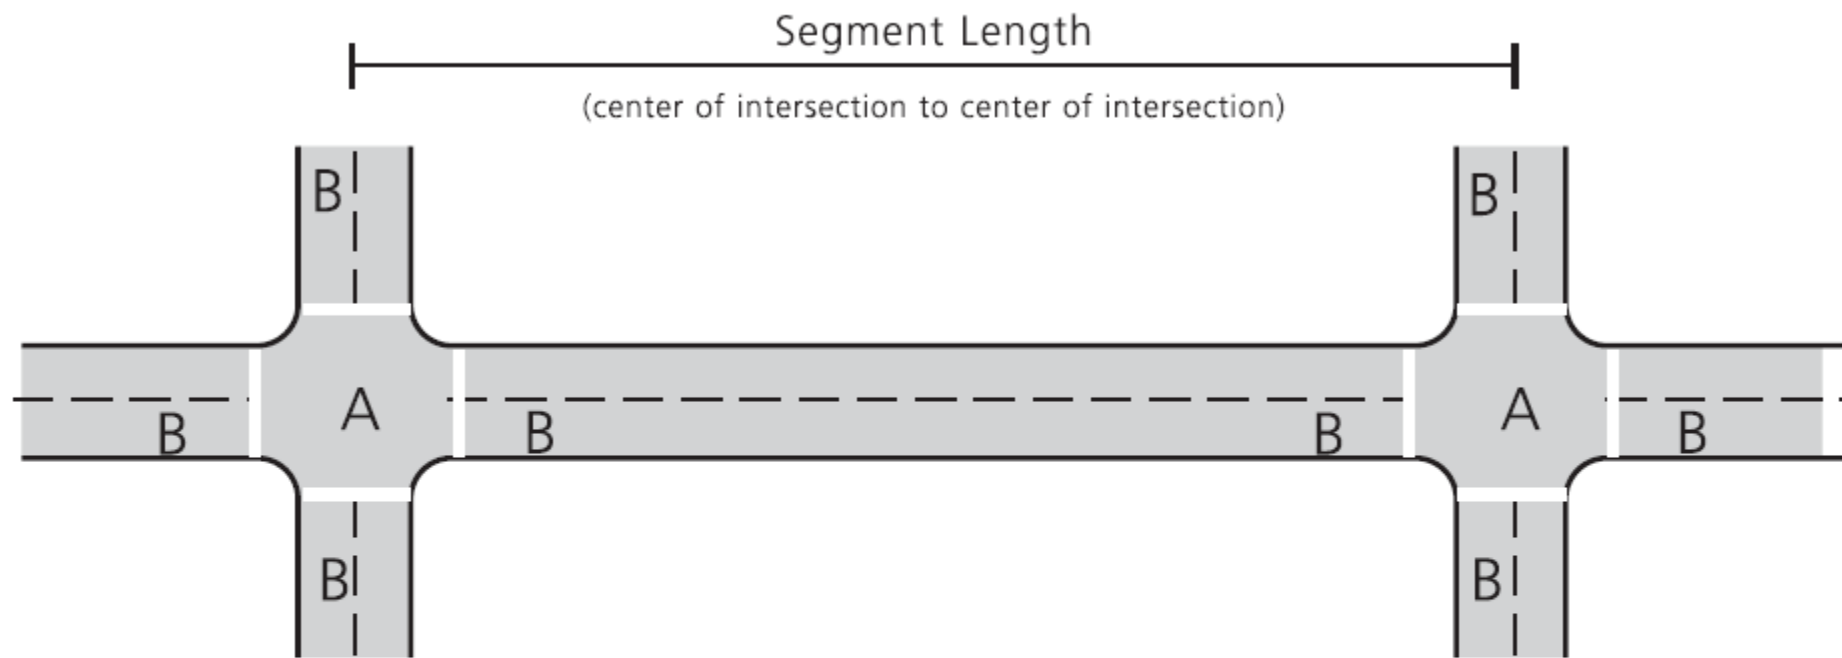

2. Methodology available for two lane undivided, three lane with center two way left turn lane, four lane divided and undivided, and five lane with center two way left turn lane. The methodology for six lane arterials is under development.

Data Collection for HSM Predictive Method

- Traffic volume and geometric data collection
 - Data for roadway segments
 - Data for intersections
- Historical crash data collection and collision diagram development
- Local conditions data collection and condition diagram development

Terrain (flat vs. level or rolling)		✓	
Presence of lighting		✓	✓

A All crashes that occur within this region are classified as intersection crashes.

B Crashes in this region may be segment or intersection related, depending on the characteristics of the crash.

Figure A-1. Definition of Roadway Segments and Intersections

Traffic Volume and Geometry Data for Roadway Segments

- HSM Chapter 10 - Rural two-lane roadways
 - Data required to compute base crash prediction
 - Roadway Annual Average Daily Traffic (AADT)
 - Homogeneous roadway segment length
 - Data required to computer crash modification factors (CMF)
 - Lane width
 - Should width and type
 - Horizontal curvature and super-elevation
 - Grade level
 - Driveway density
 - Center rumble strips
 - Passing lane and two-way left-turn lane
 - Roadside design
 - Presence of lighting and automated speed enforcement

Traffic Volume and Geometry Data for Intersections

- HSM Chapter 10 - Rural two-lane roads
 - Data required to compute base crash prediction
 - Intersection configuration
 - Major and minor road AADT
 - Data required to compute CMF
 - Intersection skew angle
 - Number of approaches with left-turn lanes
 - Number of approaches with right-turn lanes
 - Intersection lighting

2) Values in this spreadsheet may be copied and pasted directly into NCHRP 17-38 spreadsheets which are available from FDOT Safety Office upon request. Note that only values and not formulas should be copied.			
Field Data Collection			
Roadway type (divided / undivided)	Divided		
Length of segment, L (m)	0.3		
AADT (veh/day)	<div style="display: flex; align-items: center;"> <div style="border: 1px solid black; padding: 2px; margin-right: 10px;"> AADT_{max} = 89,300 (Divided) 33,200 (Undivided) </div> <div style="text-align: right;">(veh/day)</div> </div>		
AADT _{max}	7,100		
Lane width (ft)	12		
Shoulder width (ft) - right shoulder width for divided [if differ for directions of travel, use average width]	4		
Shoulder type - right shoulder type for divided	Paved		
Median width (ft) - for divided only (if analyzing an undivided segment, place the text "Not Applicable" in the input box)	20		
Side Slopes - for undivided only (if analyzing a divided segment, place the text "Not Applicable" in the input box)	1.5		
Lighting (present/not present)	Not Present		
Auto speed enforcement (present/not present)	Not Present		
Calibration Factor, C _f	1.10

Figure 5-6. Rural Multi-Lane Roadway Intersection Data Collection
(Form No. 750-020-05f)

State of Florida Department of Transportation		Form 750-020-05f TRAFFIC ENGINEERING February 2015	
DATA COLLECTION RURAL MULTI-LANE ROADWAYS - INTERSECTIONS			
General Analysis Information		Site Information	
Intersection Number	1	Roadway Name	SR 50
Intersection Name	SR 472 and SR 50	Location	Sumter County
Analysis Year	2014	Project Number	11730.36
Notes			
1) Values in this spreadsheet may be copied and pasted directly into NCHRP 17-38 spreadsheets which are available from FDOT Safety Office upon request. Note that only values, and not formulas should be copied.			
2) 3ST= 3 leg stop control, 4ST = 4 leg stop control, 4SG = 4 leg signalized			
Field Data Collection			
Intersection type (3ST, 4ST, 4SG)	4SG		
AADT _{major} (veh/day)	<div style="display: flex; align-items: center;"> <div style="border: 1px solid black; padding: 2px; margin-right: 10px;"> AADT_{max} = 43,500 h/day </div> <div style="text-align: right;">(veh/day)</div> </div>		
AADT _{minor} (veh/day)	7,500		
AADT _{minor}	<div style="display: flex; align-items: center;"> <div style="border: 1px solid black; padding: 2px; margin-right: 10px;"> AADT_{max} = 18,500 h/day </div> <div style="text-align: right;">(veh/day)</div> </div>		
AADT _{minor}	1,500		
Intersection skew angle (degrees)	0		
Number of non-STOP-controlled approaches with left-turn lanes (0, 1, 2)	0		
Number of non-STOP-controlled approaches with right-turn lanes (0, 1, 2, 3, or 4)	0		
Intersection lighting (present/not present)	Not Present		
Calibration Factor, C _f	1.50

Traffic Volume and Geometry Data for Roadway Segments

- HSM Chapter 12 - Urban and suburban arterials
 - Data required to compute base crash prediction
 - Roadway type
 - Roadway AADT
 - Homogeneous roadway segment length
 - Data required to compute CMF
 - Type of street parking
 - Proportion of curb length with on-street parking
 - Roadside fixed objects density/offset to roadside fixed objects
 - Median width
 - Presence of lighting and automated speed enforcement

Traffic Volume and Geometry Data for Intersections

- HSM Chapter 12 - Urban and Suburban Arterials
 - Data required to compute base crash prediction
 - Intersection configuration
 - Major and minor road AADT
 - All daily pedestrian crossing volumes (signalized intersections)
 - Maximum number of lanes crossed by pedestrians (signalized intersections)
 - Data required to compute CMF
 - Unsignalized intersection
 - ✓ Number of major road approached with left-turn lanes
 - ✓ Number of major road approaches with right-turn lanes
 - Signalized intersection
 - ✓ Number of approaches with left-turn lanes/right-turn lanes/RTOR prohibited
 - ✓ Type of left-turn signal phasing
 - ✓ Presence of lighting and intersection red-light camera

Data Collection Forms in Manual on Uniform Traffic Studies (MUTS)

**Figure 5-3. Urban/Suburban Arterial Segment Data Collection
(Form No. 750-020-05c)**

State of Florida Department of Transportation		Form 750-020-05c TRAFFIC ENGINEERING February 2015	
DATA COLLECTION URBAN/SUBURBAN ARTERIALS - SEGMENTS			
General Analysis Information		Site Information	
Segment Number	1	Roadway Name	SR 423
Segment Limits	Bennet Ave to US 17/82	Location	Winter Park
Analysis Year	2014	Project Number	11730.42
Notes			
1) A roadway must have homogeneous characteristics in order to be analyzed as a single segment. If any characteristics change, including any of the data inputs in this spreadsheet, then the roadway must be analyzed as separate segments and this spreadsheet should be copied and filed out for each analysis segment independently.			
2) Values in this spreadsheet may be copied and pasted directly into NCHRP 17-38 spreadsheets which are available from FDOT Safety Office upon request. Note that only values and not formulas should be copied.			
3) 2U = 2 lane undivided, 3T = 3 lane with center left turn lane, 4U = 4 lane undivided, 4D = 4 lane divided, 5T = 5 lane with center left turn lane			
Field Data Collection			
Roadway type (2U, 3T, 4U, 4D, 5T)	4D		
Length of segment, L (mi)	0.25		
AADT (veh/day)	AADT _{max} = 66,000 (veh/day)		
Type of on-street parking (none/parallel/angle)	None		
Proportion of curb length with on-street parking	0		
Median width (ft) - for divided only	20		
Lighting (present / not present)	Present		
Auto speed enforcement (present / not present)	Not Present		
Major commercial driveways (number)	5		
Minor commercial driveways (number)	1		
Major industrial / institutional driveways (number)	0		
Minor industrial / institutional driveways (number)	0		
Major residential driveways (number)	0		
Minor residential driveways (number)	0		
Other driveways (number)	0		
Speed Category	Posted Speed Greater than 30 mph		
Roadside fixed object density (fixed objects / mi)	30		
Offset to roadside fixed objects (ft) [if greater than 30 or Not Present, input 30]	15		
Calibration Factor, Cr	1.62

**Figure 5-7. Urban/Suburban Roadway Intersection Data Collection
(Form No. 750-020-05g)**

State of Florida Department of Transportation		Form 750-020-05g TRAFFIC ENGINEERING February 2015	
DATA COLLECTION URBAN/SUBURBAN ARTERIALS - INTERSECTIONS			
General Analysis Information		Site Information	
Intersection Number	1	Roadway Name	SR 50
Intersection Name	SR 472 and SR 50	Location	Sumter County
Analysis Year	2014	Project Number	11730.36
Notes			
1) Values in this spreadsheet may be copied and pasted directly into NCHRP 17-38 spreadsheets which are available from FDOT Safety Office upon request. Note that only values, and not formulas should be copied.			
2) 3ST = 3 leg stop control, 3SG = 3 leg signalized, 4ST = 4 leg stop control, 4SG = 4 leg signalized			
Field Data Collection			
Intersection type (3ST, 3SG, 4ST, 4SG)	4ST		
AADT _{major} (veh/day)	AADT _{max} = 46,800 h/day		
AADT _{minor} (veh/day)	AADT _{max} = 5,900 h/day		
Intersection lighting (present/not present)	Present		
Calibration factor, C _i	1.00		
Data for unsignalized intersections only:			
Number of major-road approaches with left-turn lanes (0,1,2)	0		
Number of major-road approaches with right-turn lanes (0,1,2)	0		
Data for signalized intersections only:			
Number of approaches with left-turn lanes (0,1,2,3,4) [for 3SG, use maximum value of 3]	2		
Number of approaches with right-turn lanes (0,1,2,3,4) [for 3SG, use maximum value of 3]	2		
Number of approaches with left-turn signal phasing [for 3SG, use maximum value of 3]	2		
Type of left-turn signal phasing for Leg #1	Protected / Permissive		
Type of left-turn signal phasing for Leg #2	Protected / Permissive		
Type of left-turn signal phasing for Leg #3	Not Applicable		
Type of left-turn signal phasing for Leg #4 (if applicable)	Not Applicable		
Number of approaches with right-turn-on-red prohibited [for 3SG, use maximum value of 3]	0		
Intersection red light cameras (present/not present)	Not Present		
Sum of all pedestrian crossing volumes (PedVol) -- Signalized intersections only	10		
Maximum number of lanes crossed by a pedestrian (n _{max})	0		
Number of bus stops within 300 m (1,000 ft) of the intersection	0		
Schools within 300 m (1,000 ft) of the intersection (present/not present)	Present		
Number of alcohol sales establishments within 1,000 ft of the intersection	0

Historical Crash Data

- Historical Crash Data
 - FDOT Crash Analysis Reporting (CAR) system for historical crash data
 - Permission required for access to FDOT CAR system
 - General format of police reports changed in 2011
 - Different values assigned to harmful events
 - FHP uses single form for long-form and short-form crashes after 2011
 - Short-form may still be used by local agencies
- Empirical Bayesian (EB) Method
 - Calculate expected crashes based on predicted and observed crashes with EB method
 - Equations in the Highway Safety Manual (HSM), Part C, Appendix A

Collision Diagrams

- Not required for HSM Part C crash predictive method
- Benefits for collision diagram
 - Provides a visual representation of crash patterns
 - Helps identify crash clusters by crash type
 - A valuable tool for determining countermeasures
- Software program available for developing collision diagrams
- Spot check automated collision diagrams for crash spatial location

Figure 5-9. Collision Diagram for Segments (Form No. 750-020-05i)

State of Florida Department of Transportation		Form 750-020-05i TRAFFIC ENGINEERING February 2015																					
COLLISION DIAGRAM - SEGMENT
